NATIONAL
FIRST QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

*The Measure of Hiring Expectations is the difference between the percentage of employers predicting staff increases and those planning to decrease hiring activity.

The new year will begin amidst a declining job outlook. Among almost 12,500 employers surveyed in nearly 400 cities, 19% express intentions to add to their employment rolls during the first quarter of 1986, while 13% plan staff reductions. Another 66% plan no change and 2% are not yet certain.

The January, February and March quarter is seasonally a slow employment period as special holiday workers leave their November-December jobs and cold weather afflicts construction and other outdoor activities in the Northern states. The coming quarter is no exception.

Few bright spots exist for the first three months of 1986. Finance, Insurance and Real Estate firms are the most optimistic. Opportunities also exist in Public Administration and Education.

Hiring in the Durable Goods Manufacturing sector is expected to be considerably down from the comparable period last year, with more than one-third fewer firms projecting staff increases.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %
Mining	12	72	12	4	0

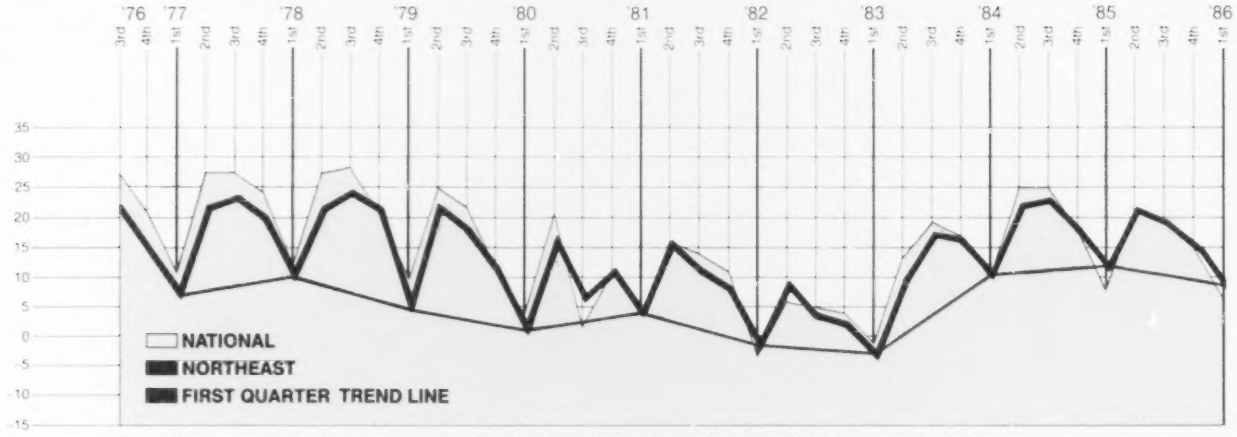
MEASURE OF HIRING EXPECTATIONS*



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Although the outlook in the Northeast is at its lowest point in three years, it remains better than most first quarters in the past decade. It is also above the national average for the quarter ahead.

Finance, Insurance and Real Estate jobs should be the most plentiful, with better than average opportunities in Transportation and Public Utilities and in the Services sector.

Although construction activity is at its midwinter low level, the first quarter outlook is higher than past seasonal trends. Only once in the past 10 years has the first quarter construction hiring been brighter.

Manufacturing opportunities, though limited, are ahead of the current national average.

MIDWEST
FIRST QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

In all categories, employment expectations in the Midwest lag behind other regions of the country, continuing a trend established in earlier quarters.

Midwesterners count heavily on a healthy manufacturing sector, but both Durable and Non-Durable Goods Manufacturing are suffering their lowest hiring levels in three years. This is also true in the seasonally sluggish Construction industry and the Wholesale and Retail sector.

More optimism can be found among Finance, Insurance and Real Estate companies and in the Services sector. Basically, midwestern employers will be looking to brighter days in the spring season.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %
Mining*					
Construction	14	49	36	1	22

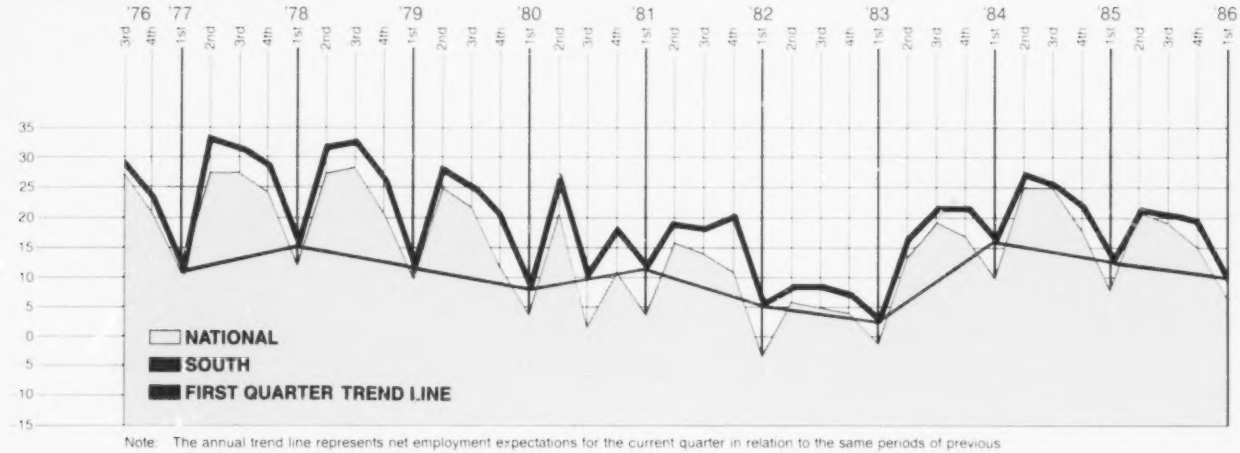
MEASURE OF HIRING EXPECTATIONS*



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Southern states, customarily the bright spot of the nation during the winter months, are again ahead of other regions.

Southern companies provide the most favorable hiring outlook in Mining, Construction, Non-Durable Goods Manufacturing, Wholesale and Retail, Finance, Insurance and Real Estate, Education, Services, and Public Administration.

While the Wholesale and Retail outlook surpasses those of other regions, it is still seasonally weak. Non-Durable Goods Manufacturing approximates the first quarter levels of 1984 and 1983, and exceeds those of 1982 and 1981. The Education forecast is more favorable than any first quarter in the 1980's. And for Public Administration, no first quarter has been better in the survey's 10-year history.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %
Mining	12	79	7	2	5

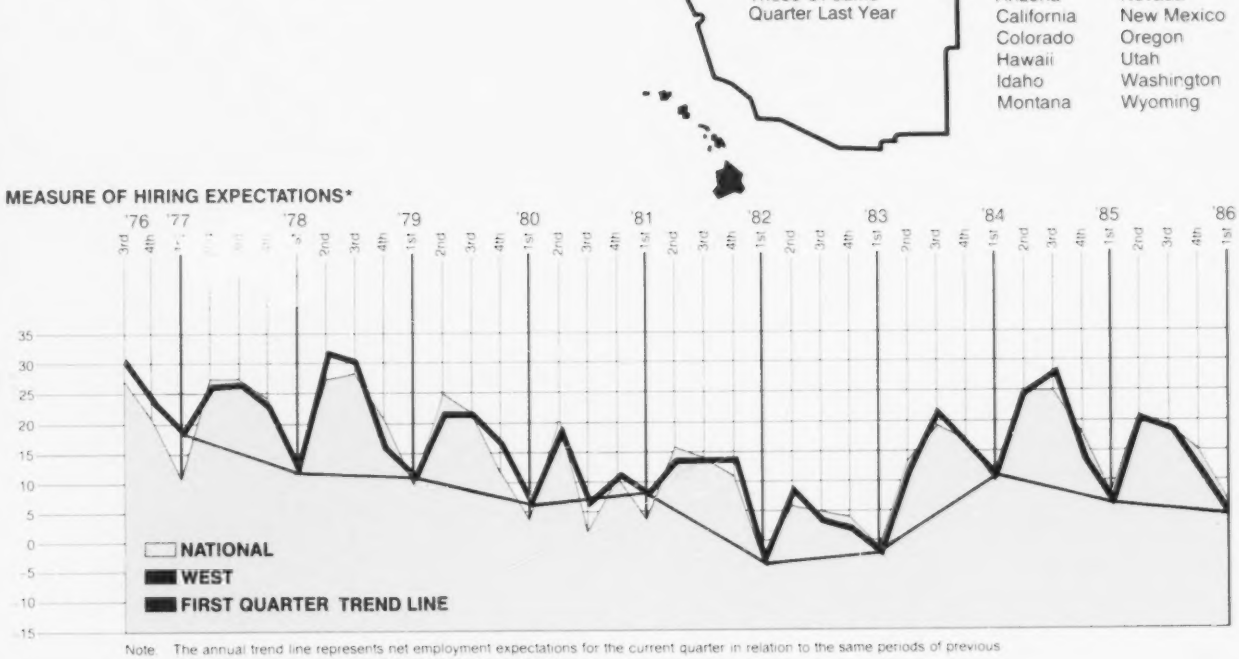
MEASURE OF HIRING EXPECTATIONS*



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

The Western outlook is slightly below the national average, but an unusual strength comes from the nation's strongest outlook in Durable Goods Manufacturing. This represents an encouraging regeneration from the slump predicted three months ago. Overall, employment expectations closely approximate those of the comparable quarter of last year.

The outlook for Education is expected to exceed any first quarter since 1977 and for Services since 1981. The present optimism in Finance, Insurance and Real Estate has been exceeded only once in the past 24 quarterly surveys since the beginning of 1981.

Other sectors are at or near national averages.

The quarterly Employment Outlook Survey is conducted as a public service of Manpower, Inc. The survey was designed and is administered by Manpower's International Research Department, utilizing a statistically representative sample of more than 12,500 large public and private employers from among ten industrial sectors in 373 U.S. cities.

The first quarter 1986 survey is a measurement of employment plans for the permanent workforce and is based upon interviews conducted with the survey sample immediately prior to December 1, 1985.

The survey results reflect the intentions of the sample employers interviewed. Some of these intentions may change unexpectedly upon the conclusion of the survey.

EMPLOYMENT OUTLOOK SURVEY: First Quarter 1986

Manpower, Inc.

SUMMARY OF RESULTS

The following table shows the percentage of nearly 12,500 employers in 373 U.S. cities who plan to increase or decrease the size of their workforce during the first quarter of 1986 (January, February, March), compared to the first quarter, 1985 and fourth quarter, 1985.

	% Planning Increase			% Planning Decrease		
	1st Qtr. 1986	1st Qtr. 1985	4th Qtr. 1985	1st Qtr. 1986	1st Qtr. 1985	4th Qtr. 1985
National	19	20	25	13	12	10
Northeast	20	22	25	12	11	9
Midwest	16	17	22	17	15	12
South	21	23	27	11	10	8
West	19	19	24	14	13	13

National — The first quarter is seasonally a slow employment period and the coming quarter is no exception. Finance/Insurance/Real Estate firms are the most optimistic. The Durable Goods Manufacturing sector is expected to be down considerably from the same period last year.

Northeast — Hiring plans are above the national average. Brightest outlook is in the Finance/Insurance/Real Estate sector. Opportunities should be better than average in Transportation/Public Utilities and among Services firms.

Midwest — In all categories, employment expectations lag behind other areas, continuing a trend established in earlier quarters. Both Durable and Non-Durable Goods Manufacturers are suffering their lowest hiring plans in three years.

South — Southern states, normally the winter bright spot, are again ahead of other regions. Southern companies provide the nation's most favorable hiring outlook in Mining, Construction, Non-Durable Goods Manufacturing, Wholesale/Retail, Finance/Insurance/Real Estate, Education, Services, and Public Administration.

West — Outlook is slightly below national average, but unusual strength comes from the nation's strongest picture in Durable Goods Manufacturing. Overall, expectations approximate those of the comparable quarter last year.

SECOND QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

*The Measure of Hiring Expectations is the difference between the percentage of employers predicting staff increases and those planning to decrease hiring activity.

Hiring plans for the second quarter of 1986 are staging a rebound from the sluggish levels of the past two quarters. The change is particularly evident in the manufacturing industries. Both Durable and Non-Durable Goods Manufacturers indicate stronger hiring plans and fewer reductions than were predicted in the past year.

In the Construction industry, expectations are nearly as high as in the highly favorable second quarter a year ago. Finance/Insurance/Real Estate firms—the clear national leaders last quarter—continue to forecast the same high employment activity as three months ago.

Employment plans among Wholesale/Retail firms are rebounding smartly from the traditional post-holiday staff reductions experienced three months ago. They foresee hiring activity to match that of a year ago.

The results of the survey show an unusual consistency from region to region. Only the Western states lag behind a bit. Other areas are almost the same from one to another.

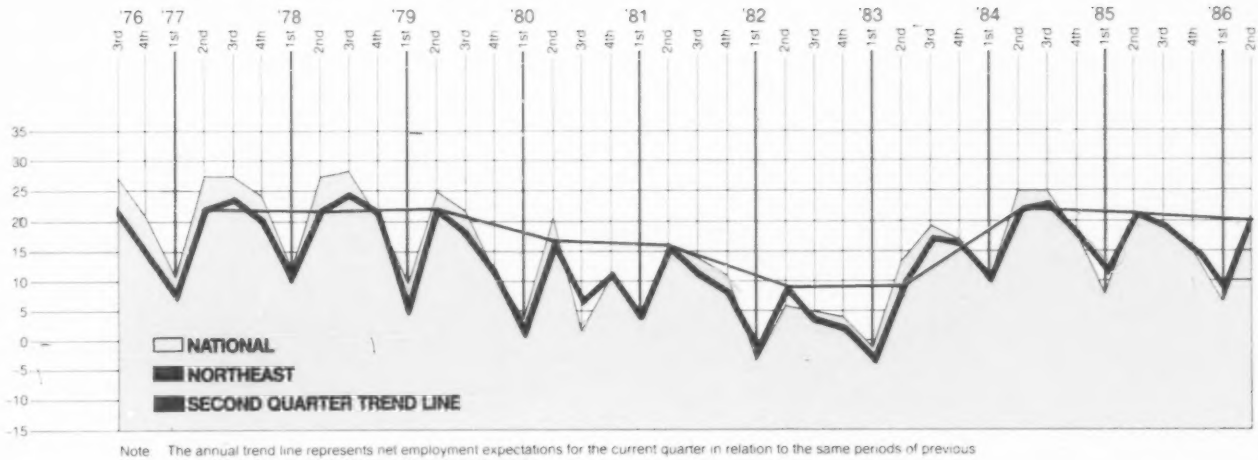
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Bouncing from a deep low to its most optimistic level in two years, the employment outlook seems to have recovered fully. In fact, only a six-month period in mid-1984 prevents the coming quarter from being the most optimistic forecast since the late 1970's. This will be the third consecutive year of a second quarter increase in employment plans for the area.

The Construction industry, usually hiring workers for springtime projects at this season, again leads the way. Only once since 1978 has the Construction industry been more positive than the present forecast.

Finance/Insurance/Real Estate companies and Transportation & Public Utilities firms are also looking forward to the most optimistic hiring plans in the 10-year history of the survey.

The Northeast shows the strongest expectations in the nation. Only Non-Durable Goods Manufacturers and Public Administration employers fall below the national averages.

SECOND QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

The second quarter has traditionally shown strong employment plans by Midwest employers, and this year is no exception. After recording a negative outlook three months ago, the Midwest now has 28% of the companies planning to add staff and only 7% expecting to reduce employment.

The Construction industry—customarily strong in the second quarter—hasn't had a more favorable job outlook in 10 years! The Wholesale/Retail sector is anticipating a better than normal second quarter picture, which is ahead of the national average. The Finance/Insurance/Real Estate industry continues the favorable expectations of last quarter.

Manufacturers are optimistic as both Durable and Non-Durable Goods Manufacturing companies approximate the national averages. Only the Education field seems to show clear weakness in this area.

SECOND QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Although not significantly better than other regions of the country, employers in the Southern states plan one of their strongest hiring campaigns of the 1980's, and nearly all industry sectors will share in it.

The Construction industry, though highly optimistic, still falls slightly below the historical boom usually planned for the second quarter. Finance/Insurance/Real Estate employers anticipate more staff growth than in any quarter since 1979. After the traditional lackluster first quarter, Wholesale/Retail firms are forecasting strong hiring plans for the spring.

Only public sector plans seem a bit sluggish. The Public Administration field anticipates further hiring in less cases than last quarter. The same is true for plans among Education employers.

SECOND QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

The outlook in the Western states is clearly lagging behind the other regions, but the picture is much brighter than three months ago nonetheless.

Most sectors show a less favorable hiring level than the normal second quarter patterns. The important Durable Goods Manufacturing sector expresses hiring expectations above the national average. The large Western industries, such as Services firms and Wholesale/Retail businesses, fall somewhat behind the usual expectations of this season.

Public Administration and also the Public and Private Education field are looking toward rather favorable hiring levels this quarter. Both forecast more activity than usual at this springtime season.

The survey was designed and is administered by Manpower's International Research Department, utilizing a statistically representative sample of more than 12,500 large public and private employers from among ten industrial sectors in 383 U.S. cities.

The second quarter 1986 survey is a measurement of employment plans for the permanent workforce and is based upon interviews conducted with the survey sample immediately prior to March 1, 1986.

The survey results reflect the intentions of the sample employers interviewed. Some of these intentions may change unexpectedly upon the conclusion of this survey.

EMPLOYMENT OUTLOOK SURVEY: Second Quarter 1986

Manpower Inc.

SUMMARY OF RESULTS

The following table shows the percentage of over 12,500 employers in 383 U.S. cities who plan to increase or decrease the size of their workforce during the second quarter of 1986 (April, May, June), compared to the second quarter, 1985 and first quarter, 1986.

	% Planning Increase			% Planning Decrease		
	2nd Qtr. 1986	2nd Qtr. 1985	1st Qtr. 1986	2nd Qtr. 1986	2nd Qtr. 1985	1st Qtr. 1986
National	26	27	19	7	6	13
Northeast	26	27	20	6	6	12
Midwest	28	28	16	7	6	17
South	28	27	21	7	6	11
West	23	26	19	8	7	14

National Hiring plans are staging a rebound from the sluggish levels forecast in the past two quarters. Stronger hiring plans are indicated by both Durable and Non-Durable Goods Manufacturers. Construction companies, Wholesale/Retail firms, and the Finance/Insurance/Real Estate sector are also anticipating additions.

Northeast Positive second quarter plans are expressed for the third consecutive year. Booming Construction industry is the leader. Wholesale/Retail employers are also very optimistic. Transportation & Public Utilities and Finance/Insurance/Real Estate hiring expectations are at an all time high for the second consecutive quarter.

Midwest The construction industry--customarily strong in the second quarter--hasn't had a more favorable job outlook in 10 years! The Wholesale/Retail sector is anticipating a better than normal second quarter picture, which is ahead of the national average. Finance/Insurance/Real Estate industry continues the favorable expectations of last quarter.

South Although not significantly better than other regions, the Southern states show a remarkable consistency with no real weakness in any sector. Wholesale/Retail firms are reflecting a better than normal rebound from the usual first quarter doldrums.

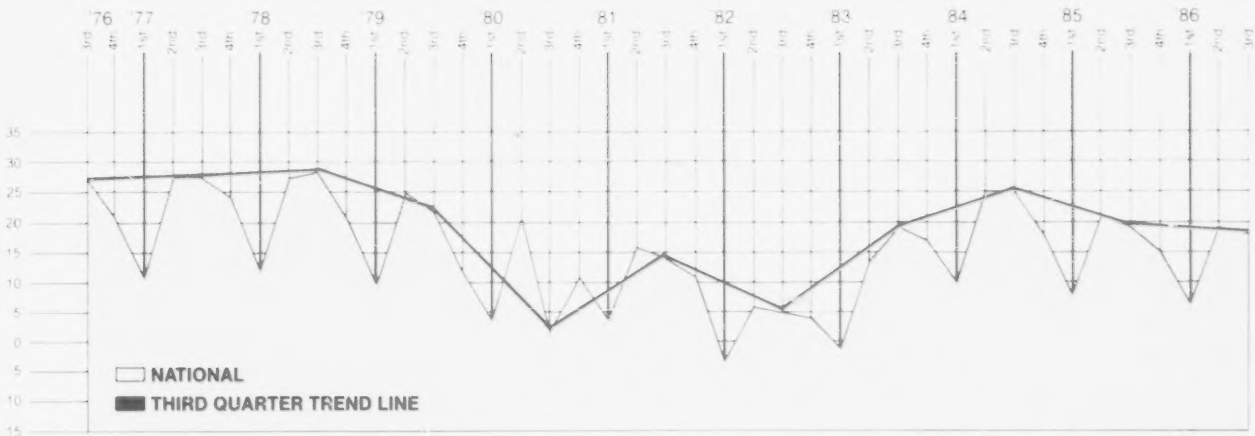
West The outlook in the Western states is clearly lagging behind the other regions, and most sectors are anticipating a less favorable hiring picture than the normal second quarter activity. Construction looks particularly slow. The best outlook is in the Public Administration field. Durable Goods Manufacturing is above the national average.

Third Quarter
July, August, September
1986

MANPOWER INC. EMPLOYMENT OUTLOOK SURVEY

NATIONAL OUTLOOK

MEASURE OF HIRING EXPECTATIONS*



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

*The Measure of Hiring Expectations is the difference between the percentage of employers predicting staff increases and those planning to decrease hiring activity.

Employment prospects for the third quarter appear bright, as 27% of the nation's employers intend on hiring additional workers, a pace which is slightly ahead of both last quarter and the third quarter of last year.

A particular weakness is evident in energy-dependent areas. Low energy prices have caused depressed conditions in such states as Texas, Oklahoma, and Louisiana.

Both Durable and Non-Durable Goods Manufacturers predict more hiring and lower levels of staff reductions compared to last year and the Finance/Insurance/Real Estate sector continues its strong position that has been a clear trend throughout 1986. The Construction industry is seasonally active and Wholesale/Retail employers are more optimistic than normal at this time of year. Taken as a whole, the coming three months should be one of the brightest third quarters of the 1980's.

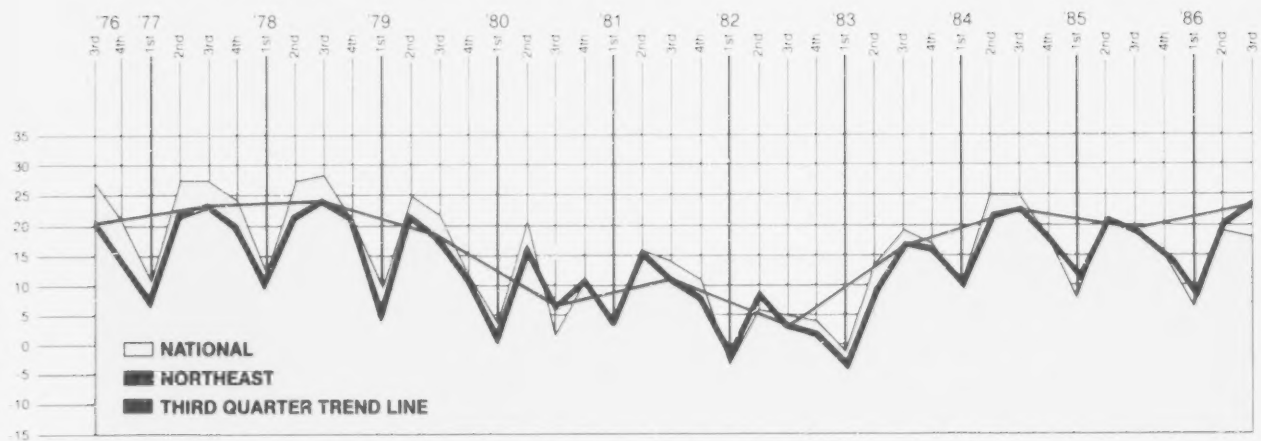
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Continuing the positive momentum built three months ago, the Northeast shows considerable optimism for the coming period. The area is bolstered by seasonally active industries such as Construction, and by basic industries such as Durable Goods Manufacturing, which is looking forward to its best quarterly employment expectations since mid-1978. Services firms anticipate the most active hiring quarter in the 10-year history of the survey. The same is true of the Finance/Insurance/Real Estate industry, which is centered in the Northeastern states.

Uncertainty is reflected among Non-Durable Goods Manufacturers, while opportunities among Transportation/Public Utilities firms appear to be weak.

Even the weaker industries, such as Education (never an area of opportunity in the summer months), Transportation/Public Utilities and Durable Goods Manufacturing, outpaced their counterparts in other regions and finished ahead of national averages.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %
Mining*					
Construction	43	51	5	1	38
Manufacturing—Durable Goods	24	61	10	5	14
Manufacturing—Nondurable Goods	31	61	5	3	26
Transportation & Public Utilities	22	66	8	4	14
Wholesale & Retail Trade	33	56	6	5	27
Finance, Insurance & Real Estate	38	55	4	3	34
Education—Public & Private	19	71	9	1	10
Services	32	58	6	4	26
Public Administration	33	58	5	4	28
All Industries	30	59	7	4	23

* The size of the mining industry's responding sample does not permit a hiring trend forecast.

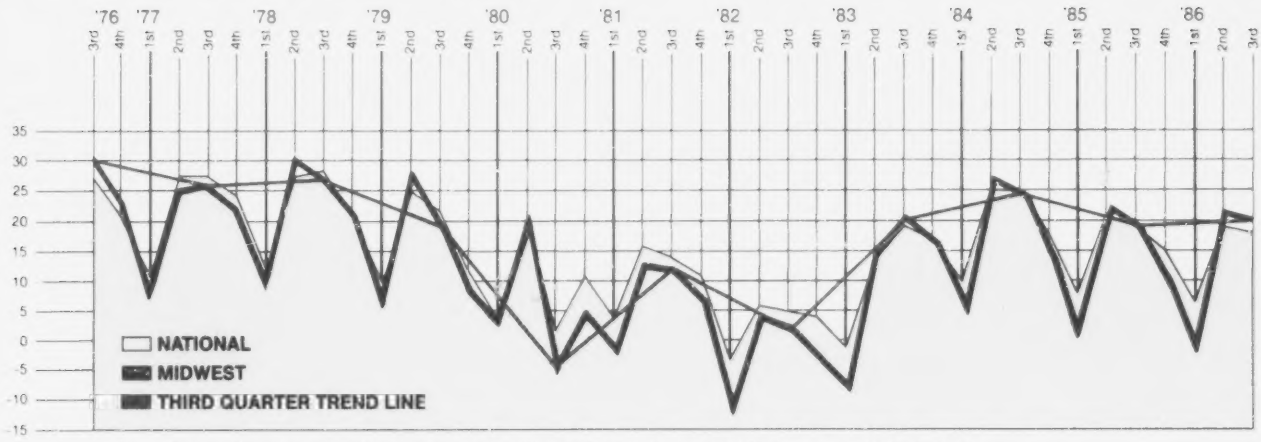
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Hiring activity is usually high in the Midwest during the summer, and 1986 is no exception. The Construction industry has assumed its normal aggressive posture and is the most optimistic area in the region, as 47% of the firms polled indicate they will add staff and only 4% expect staff declines. While normal, the present Construction outlook follows an exceptionally positive second quarter.

The important Non-Durable Goods Manufacturers also expect one of their stronger third quarter employment outlooks since the late 1970's, but Durable Goods Manufacturers forecast a below average quarter.

Additional bright spots occur among Wholesale/Retail firms, which anticipate above normal hiring patterns, and in the Finance/Insurance/Real Estate sector, which steadily has been a strong employment performer over the past three years. These firms anticipate their most favorable employment outlooks of this decade.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %
Mining*					
Construction	47	47	4	2	43
Manufacturing—Durable Goods	24	64	11	1	13

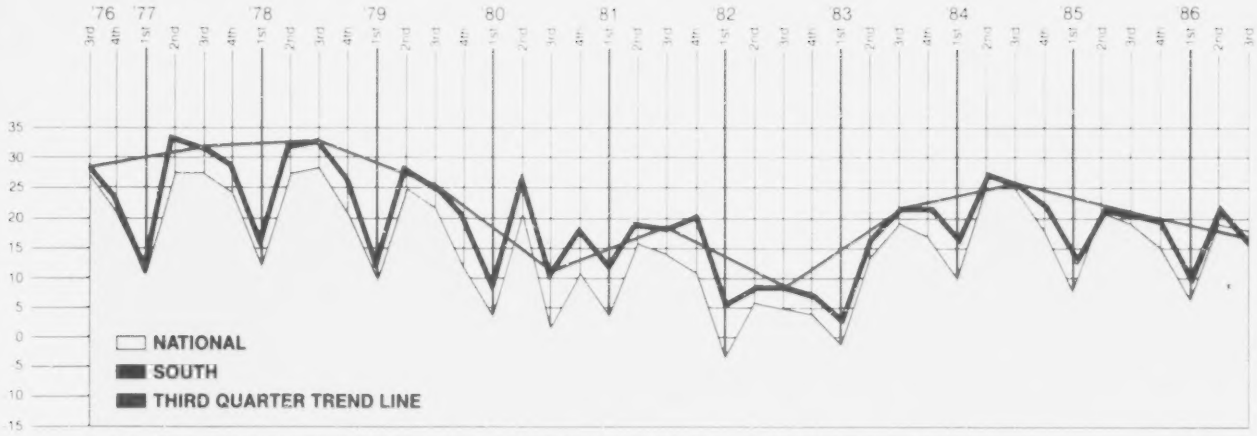
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Heavily impacted by the energy-critical areas of Texas, Louisiana and Oklahoma, the employment plans of Southern companies are below average for the first time in the survey's 10-year history. Most industries are experiencing their weakest hiring prospects since 1982.

Amid the problems, it can be observed that removing energy areas leaves other Southern states in rather healthy condition. Florida and Maryland are particularly optimistic.

Although Construction companies are the most bullish, they yet lag somewhat behind their counterparts in other regions, partly due to the fact that seasonal patterns are less pronounced in this warm-weather area. Employers in the Wholesale/Retail trade and the Finance/Insurance/Real Estate sectors have outlooks that are exceptionally positive. Expectations of Non-Durable Goods Manufacturing exceed those of last year's third quarter and Durable Goods Manufacturing's outlook is not far below that of last year.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %

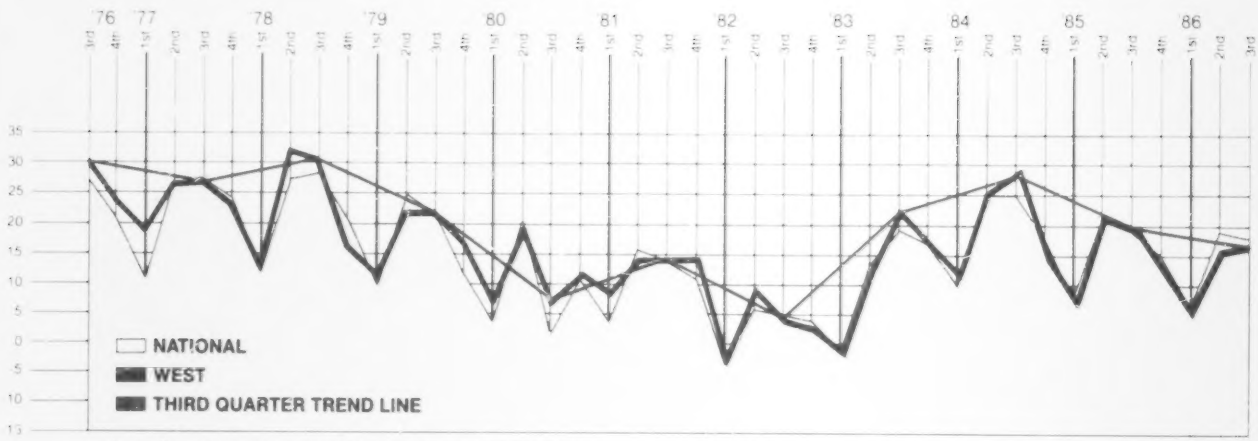
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

The impact of energy-related economics is evident to some extent in some Western states such as Colorado and southern California, so the outlook in the West is below average. Signs of Western weakness began appearing in early 1982, when employment plans of area firms first fell below national averages, and they have remained at or below the national level ever since.

Presently, Services firms report the most active hiring picture. It is, in fact, one of the nation's brightest regional outlooks in the Services sector. The same is true of Education and Public Administration employers, but opportunities in the private sector appear more limited. Hiring expectations are at or below the levels of last year's comparable quarter.

The quarterly Employment Outlook Survey is conducted as a public service of Manpower Inc. The survey was designed and is administered by Manpower's International Research Department, utilizing a statistically representative sample of more than 12,500 large public and private employers from among ten industrial sectors in 384 U.S. cities.

The third quarter 1986 survey is a measurement of employment plans for the permanent workforce and is based upon interviews conducted with the survey sample immediately prior to June 1, 1986.

The survey results reflect the intentions of the sample employers interviewed. Some of these intentions may change unexpectedly upon the conclusion of this survey.

FOURTH QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

*The Measure of Hiring Expectations is the difference between the percentage of employers predicting staff increases and those planning to decrease hiring activity.

Hiring plans will remain essentially the same in the fourth quarter of 1986 as in last quarter and the comparable quarter of 1985. A total of 24% of those interviewed anticipate employment increases compared to 25% last year and 27% one quarter ago. This indicates continuation of the steady, modest growth that has existed throughout the year.

Consistent with seasonal patterns, the Wholesale/Retail sector is the fourth quarter employment leader as the economy staffs up for the upcoming holiday season. Construction employers show evidence of a coming decline that is a bit stronger than the customary winter hibernation caused by the cold weather of Northern states, but the important Durable Goods Manufacturers reflect a stable outlook and their Non-Durable Goods counterparts evidence as much optimism as last year.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %

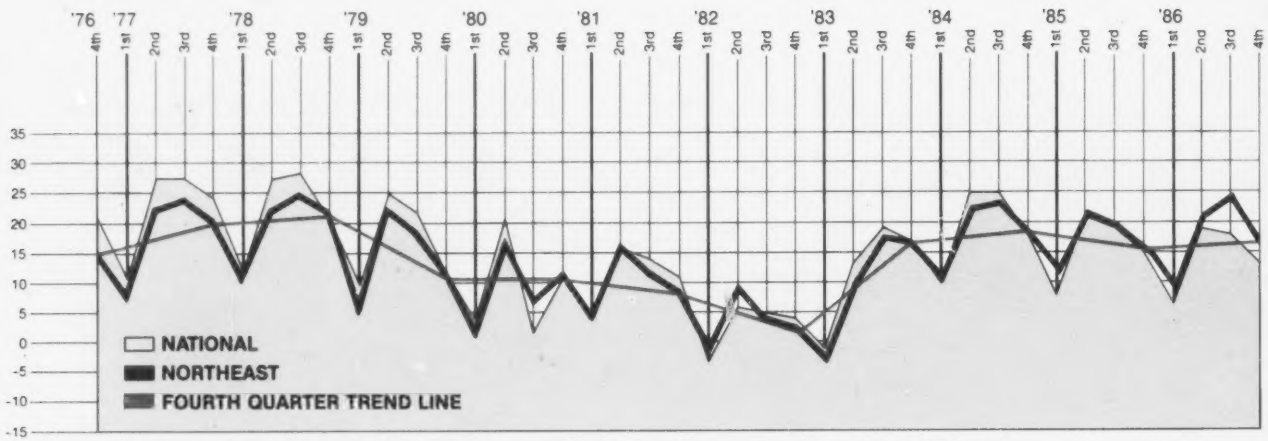
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

The pattern of consistent employment growth over the past four years will apparently continue at least to the end of 1986. More firms plan to add workers (26%) than in any fourth quarter since 1978, although 25% planned additions in the final three months of the past three years.

The Northeast leads the nation in nearly all employment categories in the private sector of the economy. As in other areas, the Wholesale/Retail Trade sector is the holiday period leader. Opportunities are above average in Finance/Insurance/Real Estate and among Education and Services employers.

Among manufacturing firms, there appears to be a recovery from the inactivity of one year ago, but prospects are not yet as high as those of late 1984 and 1983.

FOURTH QUARTER TREND LINE

Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Anticipating once again the cold weather of winter, Midwestern firms approach seasonal employment plans with a touch of caution. Nonetheless, the outlook is as optimistic as the comparable quarter of last year.

Most of the optimism lies in the Wholesale/Retail category. Finance/Insurance/Real Estate firms continue the above-average hiring patterns of the past three years.

The outlook is, of course, rather dim in the Construction industry and also among Public Administration employers. Prospects among Durable Goods Manufacturers are somewhat improved over the bleak outlook of last year, but Non-Durable Goods Manufacturers have seen fourth quarter job opportunities slipping gradually from final quarter periods of the past three years.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %

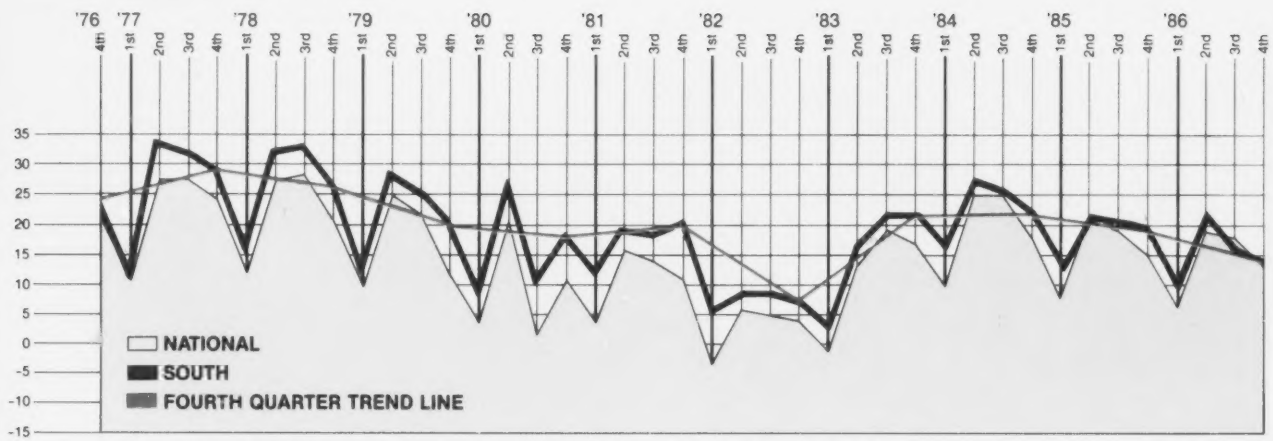
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Fourth quarter hiring in the South is expected to be a bit below comparable periods of recent years as the regional forecast calls for only slightly better job opportunities than the national average.

Construction firms in the South, accustomed to favorable year-round working conditions, anticipate a sluggish fourth quarter with fewer job opportunities. The Services and Finance/Insurance/Real Estate sectors are the most optimistic areas. Durable Goods Manufacturers expect hiring patterns similar to last quarter and last year.

A slight damper in the South comes from the states of Louisiana and Texas, where a depressed energy sector has chilled business prospects. As a result, the job outlook in those states lags well behind the rest of the nation.

Industry Category	Increase %	No Change %	Decrease %	Don't Know %	Net (Inc.-Dec.) %

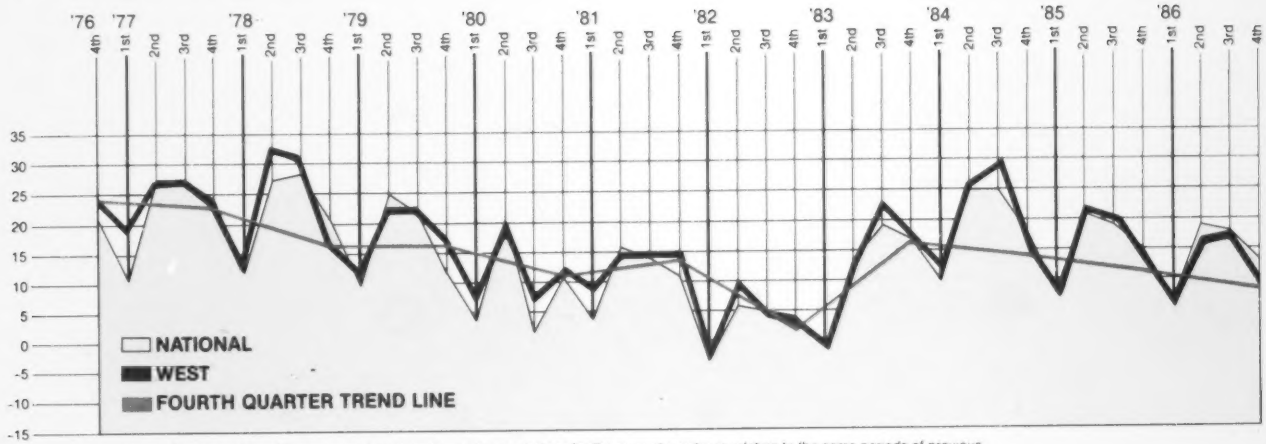
MEASURE OF HIRING EXPECTATIONS



Note: The annual trend line represents net employment expectations for the current quarter in relation to the same periods of previous years. These figures are not adjusted for seasonal variations.

Continuing a pattern of slow growth in job opportunities, the Western states' outlook for October/November/December lags behind other geographical areas. Although down only slightly from the level of three months ago, the outlook for the fourth quarter has been lower only once in the past 10 years.

Standing out with positive forecasts are the Wholesale/Retail Trade, the Services field, Finance/Insurance/Real Estate firms and Public Administration employers. Prospects are better among Non-Durable Goods Manufacturers than among their Durable Goods counterparts.

The fourth quarter 1986 survey is a measurement of employment plans for the permanent workforce and is based upon interviews conducted with the survey sample immediately prior to September 1, 1986.

The survey results reflect the intentions of the sample employers interviewed. Some of these intentions may change unexpectedly upon the conclusion of this survey.

EMPLOYMENT OUTLOOK SURVEY: Fourth Quarter 1986

Manpower Inc.

SUMMARY OF RESULTS

The following table shows the percentage of 12,725 employers in 389 U.S. cities who plan to increase or decrease the size of their workforce during the fourth quarter of 1986 (October, November, December), compared to the fourth quarter, 1985 and third quarter, 1986.

	% Planning Increase			% Planning Decrease		
	4th Qtr. 1986	4th Qtr. 1985	3rd Qtr. 1986	4th Qtr. 1986	4th Qtr. 1985	3rd Qtr. 1986
National	24	25	27	11	10	9
Northeast	26	25	30	9	9	7
Midwest	23	22	28	12	12	8
South	25	27	26	11	8	10
West	21	24	26	12	13	10

National — Hiring plans will remain essentially the same in the fourth quarter of 1986 as in last quarter and the comparable quarter of 1985. Consistent with seasonal patterns, the Wholesale & Retail sector is the fourth quarter employment leader as the economy staffs up for the upcoming holiday season.

Northeast — The Northeast leads the nation in nearly all employment categories in the private sector of the economy. Opportunities are above average in Finance, Insurance and Real Estate and among Education and Services employers.

Midwest — Most of the optimism lies in the Wholesale & Retail category. Finance, Insurance and Real Estate firms continue above-average hiring patterns.

South — Construction firms, accustomed to favorable year-round working conditions, anticipate a sluggish fourth quarter. The Services sector and Finance, Insurance and Real Estate are the most optimistic areas.

West — Continuing a pattern of slow growth in job opportunities, the outlook for the fourth quarter lags behind other geographical areas. Standing out with positive forecasts are the Wholesale & Retail Trade, the Services field, Finance/Insurance/Real Estate firms and Public Administration employers.
